

IMPOSING AND RECOVERING CORRELITHM OBJECTS

5     ABSTRACT OF THE DISCLOSURE

          Manipulating correlithm objects includes  
establishing correlithm objects of an N-dimensional  
space, where a correlithm object is a point of the space.  
The correlithm objects are imposed on the space to yield  
10    a combined point. An imposed correlithm object is  
compared to the combined point. The imposed correlithm  
object is recovered in accordance with the comparison.
